

SMART CAMPUS ENERGY-SAVING SYSTEM

Using simple data analysis to
identify possible energy wastage

Technical Presentation

THE PROBLEM WE IDENTIFIED

Lights and AC may remain ON

Even when a room has very few or no students.

Energy usage is not always easy to compare

Different rooms and buildings use different amounts of electricity.

Wastage can increase electricity cost

Unnecessary energy use can be reduced.

What our sample dataset shows

500

Records

7,773.1 kWh

Total Energy

106

Possible Wastage Cases

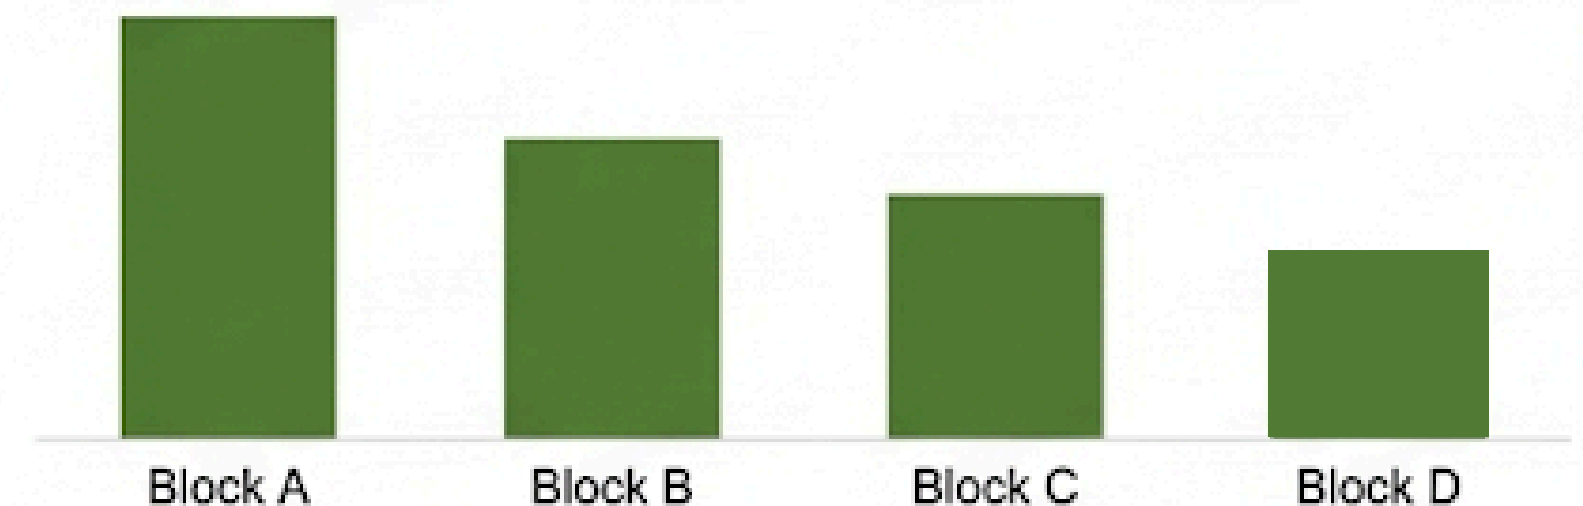

30.2°C

Average Temperature

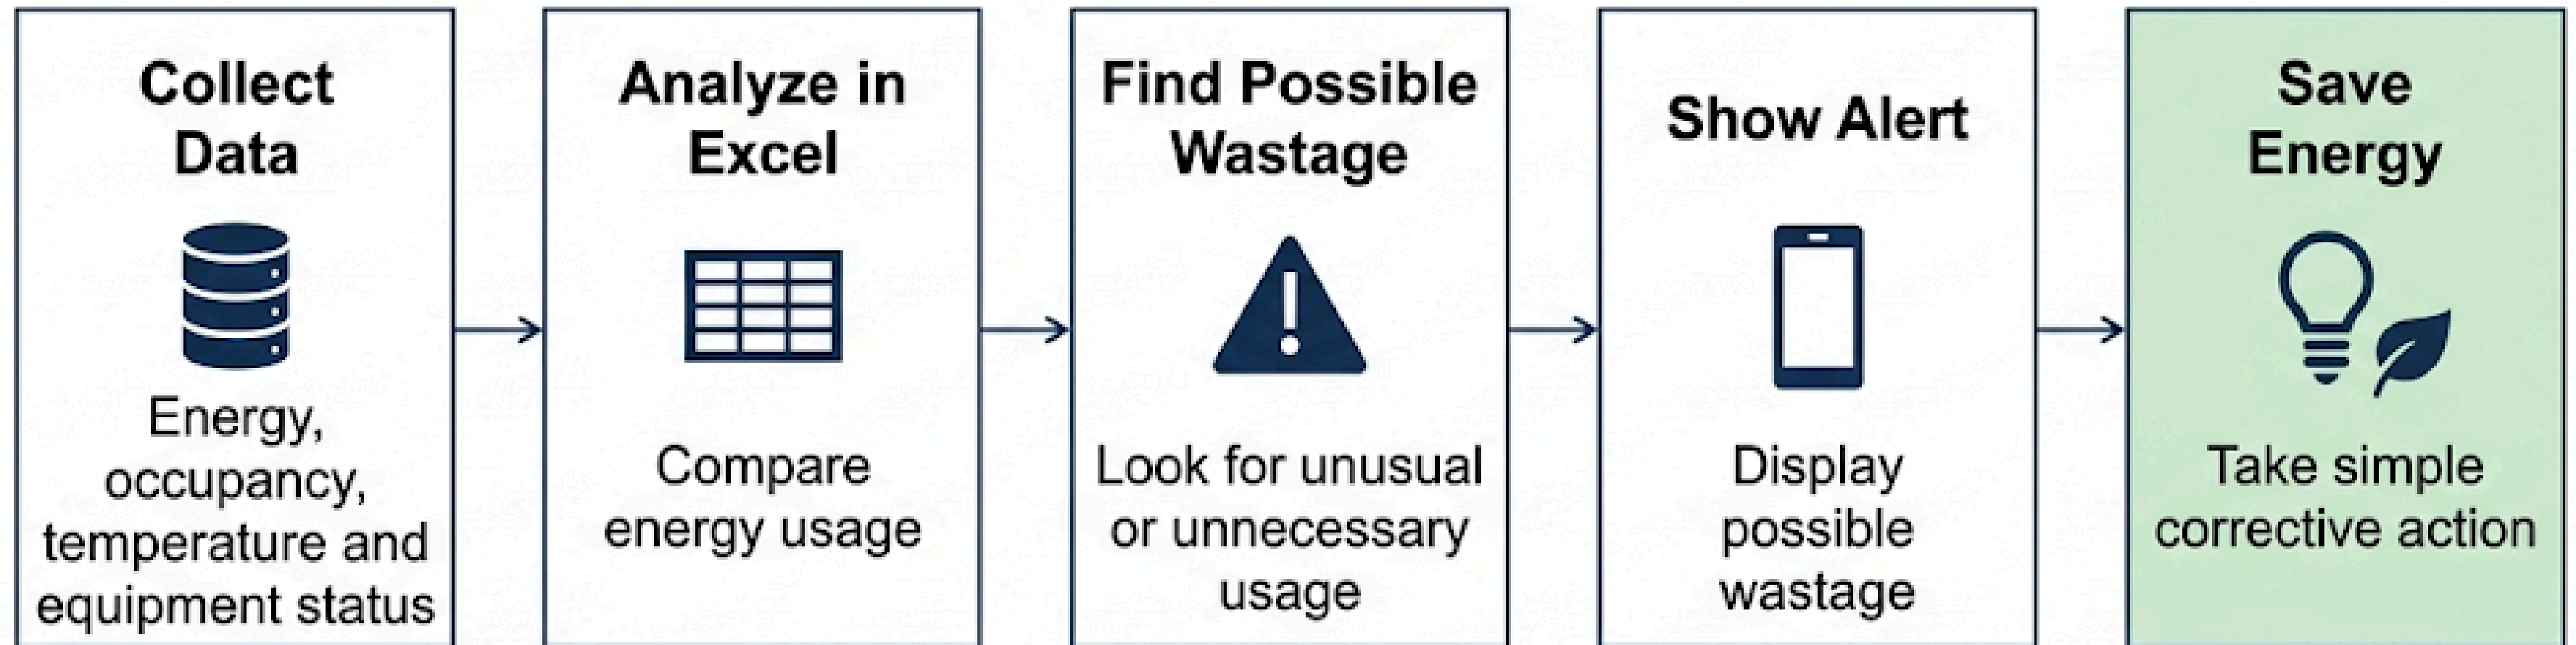

Highest energy use: Block A

Highest average occupancy: Block A

Energy Consumption by Building

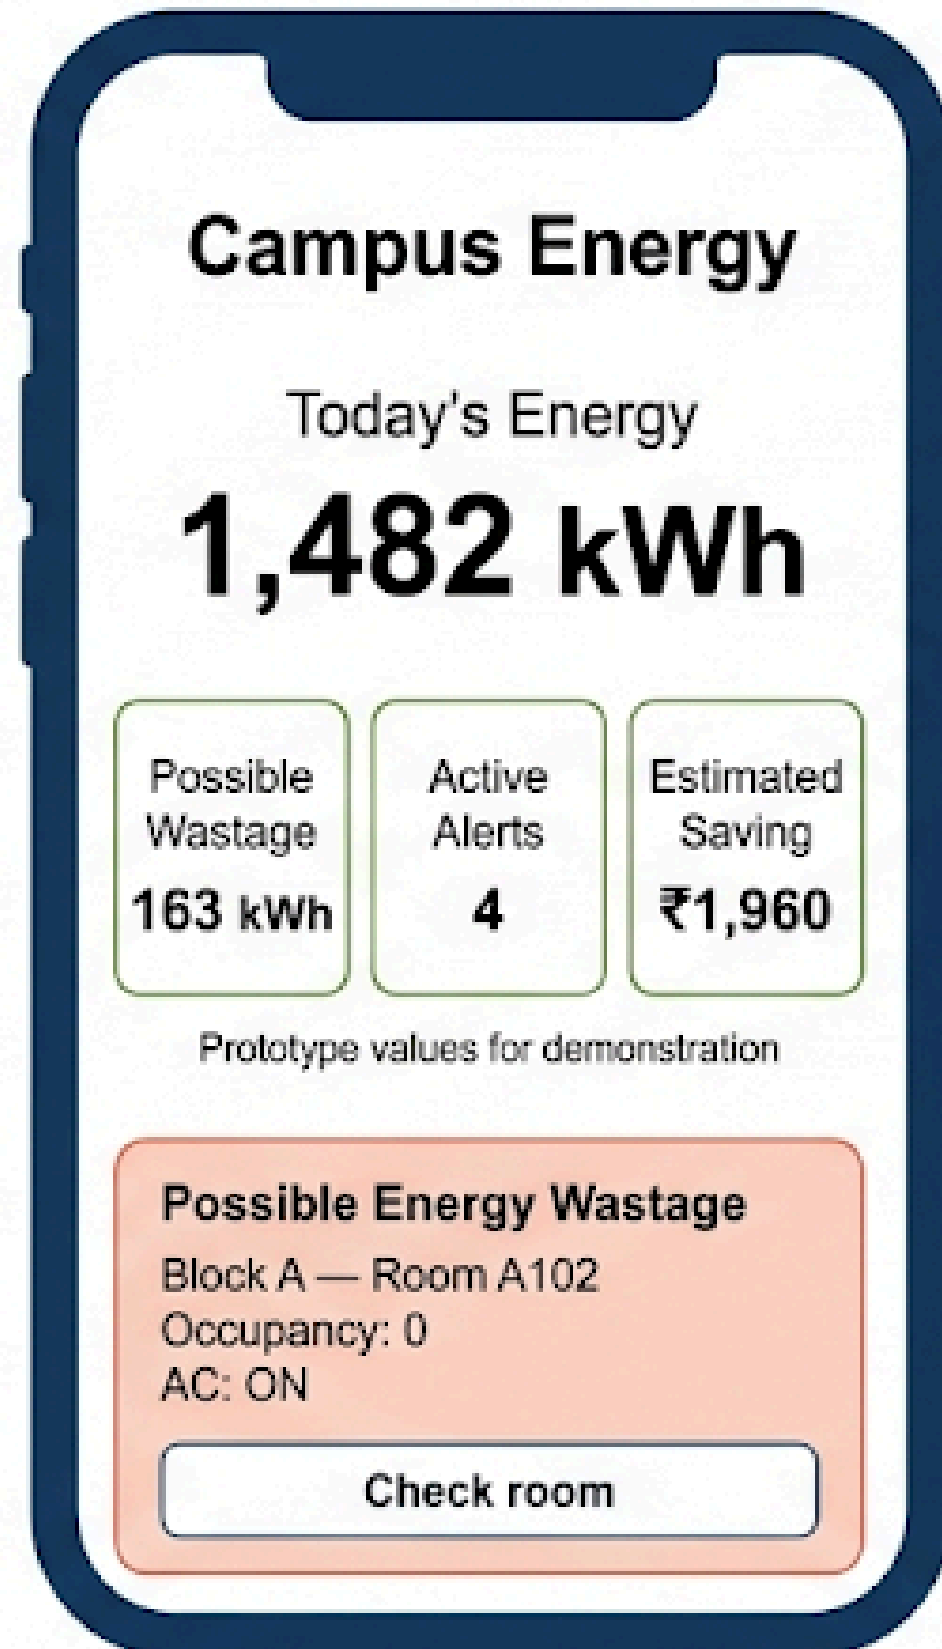

OUR PROPOSED SOLUTION

Detect -> Understand -> Act -> Save

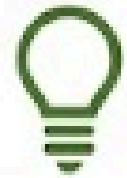

MOBILE APP PROTOTYPE

What the app can show

- ✓ Energy usage
- ✓ Possible wastage alerts
- ✓ Simple saving suggestions

EXPECTED BENEFITS

Reduce Energy Wastage

Identify rooms where electricity may be used unnecessarily.

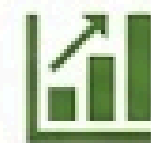

Reduce Electricity Cost

Less unnecessary usage can help reduce energy expenses.

Support a Greener Campus

Using less electricity can support campus sustainability.

Better Awareness

Students and staff can understand where energy is being wasted.

Detect -> Analyze -> Alert -> Save

Thank You
